PRODUCT INFORMATION

CONTENTS

Recombinant Human FGF-20 (Carrier-Free)

DESCRIPTION

FGF-20 is a secreted heparin binding growth factor that is a member of the FGF family. Proteins of this family play a central role during prenatal development, postnatal growth and regeneration of a variety of tissues, by promoting cellular proliferation and differentiation. FGF-20 signals through the FGFR 2c and 3c, and is expressed during limb and brain development.

MOLECULAR MASS

Recombinant Human FGF-20 is a 23.2 kDa protein containing 209 amino acid residues.
