

## TECHNICAL DATA SHEET

# FITC Anti-Mouse Ly-6G (Gr-1) (RB6-8C5)

Catalog Number: 35-5931

## PRODUCT INFORMATION

**Contents:** FITC Anti-Mouse Ly-6G (Gr-1) (RB6-8C5)

**Isotype:** Rat IgG2b, kappa

**Concentration:** 0.5 mg/mL

**Clone:** RB6-8C5

**Reactivity:** Mouse

**Formulation:** 10 mM NaH<sub>2</sub>PO<sub>4</sub>, 150 mM NaCl, 0.09% Na<sub>3</sub>N, 0.1% gelatin, pH7.2

C57Bl/6 bone marrow cells were stained with 0.5 ug FITC Anti-Mouse Ly-6G (35-5931) (right panel) or 0.5 ug FITC Rat IgG2b isotype control (left panel).

## DESCRIPTION

The RB6-8C5 antibody binds to mouse Ly-6G, commonly known as Gr-1, a member of the Ly-6 superfamily of GPI-anchored cell surface proteins with roles in cell signaling and cell adhesion. Gr-1 is differentially expressed during development and maturation of cells in the myeloid lineage and is expressed at varying stages and levels on monocytes, macrophages, granulocytes, and peripheral neutrophils. In the mouse, the RB6-8C5 antibody is typically used in combination with the macrophage labeling antibody M1/70 (Anti-CD11b) for phenotypic analysis of monocytes, macrophages and granulocytes. Note: The RB6-8C5 antibody has been reported to cross-react with Ly-6C on cells expressing this antigen (Fleming et al. 1993. *J. Immunol.* 151:2399-2408 and Sasmono et al. 2007. *J. Leukoc. Biol.* 82: 111-123) and has been cited in the literature for identification of Ly-6G/Ly-6C. Other reports suggest that this antibody is specific for Ly-6G, without cross-reactivity for Ly-6C (Nagendra S. and Schlueter AJ. 2003. *Cytometry A*, 58(2): 195-200).

## PREPARATION & STORAGE

This monoclonal antibody was purified from tissue culture supernatant via affinity chromatography. The purified antibody was conjugated under optimal conditions, with unreacted dye removed from the preparation. It is recommended to store the product undiluted at 4°C, and protected from prolonged exposure to light. Do not freeze.

## APPLICATION NOTES

This antibody preparation has been quality-tested for flow cytometry using mouse spleen cells, or an appropriate cell type (where indicated). The amount of antibody required for optimal staining of a cell sample should be determined empirically in your system.
