

TECHNICAL DATA SHEET

Purified Anti-Human / Mouse / Rat GARP

Catalog Number: 70-9875

PRODUCT INFORMATION

Contents: Purified Anti-Human / Mouse / Rat GARP

Isotype: Rabbit IgG

Concentration: 0.5 mg/mL

Clone: Polyclonal

Reactivity: Human / Mouse / Rat

Formulation: 10 mM NaH₂PO₄, 150 mM NaCl, 0.09% NaN₃,
0.1% gelatin, pH7.2

DESCRIPTION

The GARP antibody reacts with human, mouse, and rat GARP, also known as LRRC32 or Garpin, an 80 kDa transmembrane protein which acts as a receptor for the latent form of TGF-beta 1 (pro-TGF-beta), preventing its secretion. Specifically, GARP is reported to associate with the pro-domain of TGF-beta 1, known as latency-associated peptide (LAP), which must be cleaved to release the biologically active cytokine. The putative role of GARP in sequestering the TGF-beta is important for regulating its activity, as TGF-beta signaling is involved in development and function of Th17, Treg and many other immune cell types. GARP expression has been shown on platelets and at high levels on Foxp3+ Treg cells, where it is proposed to be a phenotypic identifier for activated human Treg cells. The GARP purified polyclonal antibody may be used for analysis of GARP by flow cytometry and western blotting.

PREPARATION & STORAGE

This monoclonal antibody preparation was purified from tissue culture supernatant via affinity chromatography. For In Vivo Ready™ (IVR) products, each preparation is also evaluated for endotoxin levels using the LAL assay. It is recommended to store the product undiluted at 4°C. Do not freeze.

APPLICATION NOTES

This purified format is guaranteed to be >90% pure as determined by SDS-PAGE analysis. Citations are provided as a convenience to you; please consult Materials and Methods sections for additional details about the use of any product in these publications.
